

Armour Valve

Your trusted source of specialty valves since 1971

Strengthen Your Valve Expertise

Maintaining a consistently high standard of valve maintenance and operation across your organization can be a challenge. Deviations from manufacturer-recommended procedure can result in damage to equipment, which can adversely impact process lines, your bottom line, and, in the worst cases, the health and safety of your personnel.

When your people are trained in proper maintenance, repair, and operation procedures, you can be confident that they will help to extend the life of equipment, protecting both your investment and your personnel. Armour Valve offers **Hands-On Valve Training** from factory-trained and certified technicians to help ensure that your people have the knowledge required to service our products according to manufacturer specifications.

Hands-On Valve Training

Armour Valve offers hands-on valve training either at your site or at our Toronto training facility. Seminars include hands-on instruction in valve operation, repair, maintenance, and automation. Topics include valve inspection, disassembly, parts replacement, seat refacing, reassembly, and actuation. In addition to training, each participant receives a full set of technical resources, including maintenance manuals, check lists, and a certificate of participation.

"An excellent program that meets our needs and has been well received by our staff. We intend on making Armour Valve's program a continued part of our training for maintenance workers."

Mike Campbell, Skills & Development
Toronto Water, City of Toronto

All Courses Custom-Fit for You

Because your training requirements are as individual as your personnel, Armour Valve training is custom-designed for you. A Customer Care representative works with you to develop course content and a schedule that meets the specific needs of your business and personnel.

Training is offered on a one-time basis or integrated with your ongoing training program and can be delivered either at our training facility or your location. Courses can be tailored to focus on those aspects of maintenance, repair, operation, and automation that are of greatest importance to your industry and specific valve applications.

Customers using our integrated training and awareness program have benefitted from significant increases in valve repair success and corresponding reductions in equipment replacement costs.

Our Complete Range of Customer Care Services

Armour Valve offers a range of complimentary and preferentially-priced services to valued customers. To find out if you qualify for our Customer Care program, contact us at CustomerCare@armourvalve.com.
